4 TheArtificial intelligence is rapidly transforming economies, labour markets,
5 public services, and democratic processes. While AI technologies hold the
6 potential to improve lives, reduce inequality, and support social progress, their
7 current development is overwhelmingly driven by corporate interests and
8 concentrated in the hands of a few powerful technology companies.

9 Without democratic oversight and strong regulation, AI risks deepening
10 inequality, undermining workers' rights, reinforcing discrimination, and eroding
11 democratic control.

12 **IUSY therefore demand that:**

- 13 ● Artificial intelligence is strictly regulated through democratic and
14 transparent frameworks, with human rights and social justice at their
15 core.
- 16 ● Big Tech corporations are prevented from monopolising AI development,
17 data, and infrastructure, and are held accountable for the societal impacts
18 of their technologies.
- 19 ● AI must not be used to undermine workers' rights, job security, or
20 collective bargaining, and workers must be protected in all AI-driven
21 transformations.

- 22 ● The use of AI in surveillance, policing, warfare, and migration control is
- 23 severely restricted or prohibited where it threatens human rights and
- 24 civil liberties.
- 25 ● Public authorities and international institutions take a leading role in AI
- 26 governance, ensuring that technology serves people, democracy, and the
- 27 common good - not corporate profit.
